

Healthcare Business Intelligence Solutions

We help businesses increase performance through intelligent data and analytics.

Analytical Approach to Healthcare

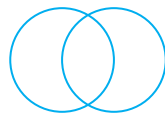

The healthcare industry is undergoing significant change, driven by the explosive growth of data, regulatory reform and patient care expectations. The rising challenges around consumers and compliance are transforming the way payers, providers and healthcare programs operate. Providers are being held to new levels of accountability and competitive pressure to embrace a patient-centric healthcare approach.

By adopting new technologies, hospital organizations can get a holistic overview on their patient needs and preferences, the delivery of services and level of quality care to maintain cost and operational efficiencies.

We offer the technology solutions to help you meet the data demands of today, the capability to retrieve actionable insights, and prepare your organization for what's ahead.

At the heart of what we do is intelligent data and analytics.

Analytics Intell leverages its extensive domain knowledge and rich experience to build strategic software systems that enable healthcare businesses to increase profitability, efficiency, and ensure better outcomes for patients, providers, and payers.

From insightful consultation to top-notch technical execution and innovative business solutions, our global professionals work with organizations to use analytics in a way that empowers stakeholders and employees to transform overwhelming amounts of data across various sources into valuable business insight.

Analytics Intell helps healthcare organizations turn hidden insights from data into actionable intelligence, in real time.

Healthcare Analytics to Deliver Value

We compile your data sources (internal and external) into a centralized BI software platform that can derive insights in real-time to drive improvements for your operational processes.

- Integration with electronic medical records
- Easily accessible data
- Timely data for quick decision-making
- Leverage information to add value and improve health outcomes
- Monitor & measure internal productivity
- Lessen administrative burdens through insightful, automated reporting

Health IT & Operations

- EMR/EHR data integration to monitor critical KPIs
- Customized Software Development
- HIPAA Compliant Software Development
- Credentialing Software Solutions
- Data Mining Software Solutions

Patient Experience

- Patient Engagement Solutions
- Remote Patient Monitoring System
- Patient Mobile /Web Application
- Business Intelligence Platforms
- Population Health Management Solutions

Analytics

- Healthcare Analytics
- Predictive Analytics
- Clinical Data Analytics
- Population Health Analytics
- Healthcare Payer Analytics
- Healthcare Request Analytics

Revenue Management

- Fraud Waste Abuse Solution
- Cost Containment Solution
- Revenue Cycle Management Solution
- Risk Adjustment Solution

Helping healthcare organizations digitally transform their business

Our data intelligence experts can work with your company to gain deep insights into all aspects of the business, enabling efficiency and productivity gains that help increase profitability while also enhancing the patient or customer experience. We provide the technology to give healthcare organizations deep insight into all aspects of their business.

Through customized, data-driven applications, healthcare organizations can boost their operational efficiency, expand their businesses, improve the quality of care, and deliver an exceptional patient experience. With smart analytics, advanced mobile capabilities, and multi-factor security features, healthcare organizations can access reports that can be modified into highly-organized, easy-to-read dashboards and consumed from computers, tablets or personal device for anyone across the organization.

Hospital Business Intelligence Solutions

- **Hospital performance**

Assess performance against peer organizations and uncover operational shortcomings, quality of care and patient satisfaction.

- **Supply Chain**

Monitor/align stock usage and inventory across the enterprise in real time and perform price benchmarking for better negotiations.

- **Hospital Operations**

Mobilize internal workflows, boost productivity, increase utilization of clinical resources and reduce patient wait times.

- **Financial Performance**

Monitor and forecast financial performance to track revenue cycle developments on the go.

- **Physician Performance**

Examine public and in-house data to evaluate physician behaviors, time management or billing practice to maximize the quality of patient care. Identify key drivers of costs as well as identify areas for improvement.

- **Population Health Management**

Source structured and unstructured patient data from multiple, disparate EHR systems. Apply predictive analytics across a wide array of patient information to stratify patient risk and suggest an initial action plan.

- **Staffing Enablement**

Identify all available healthcare resources by disciplines in proximity to a requested facility and send instant text message to all qualify resources.

Our experience

Since 2003, Analytics Intell has been a trusted data intelligence partner to many of the world's leading organizations. We help transform tremendous amounts of data from public systems, internal portals and real-time occurrences into insightful reports for action.

While we work with organizations across industries, our team has extensive, **longstanding experience in the healthcare industry.**

Prime Healthcare

Prime wanted its upper management to have quick access to the status of operations in each hospital from top to bottom, and required the tools to measure themselves against crucial KPIs.

Analytics Intell developed a customized BI platform solution in just seven months, and deployed the software across 23 hospital facilities.

The sophisticated technology solution gives management more visibility into metrics, from financial numbers to patient care to the supply chain.
